

Study Plan for PhD Studies in China

Since the beginning of my academic career, science has been my interest due to my curiosity to know the processes and applications of different things. It is a science that gives me logical answers to my questions about nature. After graduating with a BA in Architecture for practical experience I joined an engineering consulting company as a design engineer for a year, which provides design and engineering consulting services nationwide. My interest in engineering led me to get the opportunity to study for a master's degree in urban planning at the University of Beijing Jiaotong University and I graduated in 2023.

I worked as a researcher with Synaps during the past months, and currently I work as a part-time teacher in the Architecture Department at Yarmouk University in Jordan. I have good language skills (English and Chinese), and I also participated in the climate change conference in China.

I am an inspiring and proactive person. I always strive to achieve success in everything I do. I have learned how to deal with challenges and develop creative solutions. I have strong communication skills and the ability to work effectively in a team and also individually. I believe in the importance of continuous learning and self-development, and this is what motivates me to achieve success and constantly challenge myself.

I want to apply for a PhD in Architecture to further my studies, explore and understand current technologies in engineering and Architecture, and contribute to research achievements in Architecture engineering. I am personally interested and want to work in research fields, after graduation, I want to continue my work in scientific research and I also want to contribute to cultural exchanges between the people of China and my country Jordan.

For me, China is like my second home because of its long relationship with Jordan. The hardworking nature of the people of China and the rapid advancement in technology aroused my interest in it, obtaining postgraduate studies from China would allow me to improve my skills and promote cultural exchange between the people of the two countries.

I firmly believe that the faculty is experienced, China has the best research environment and all the advanced equipment required to achieve the best research achievement and improve my skills, ideas, and analytical abilities, this drives me towards pursuing a PhD.

Sincerely,
HEBAH ABU SHAMAH
